Global Equity	None	90.0	91.0
Global Property	Active	5.0	4.0

ASSET MANAGERS IN SOLUTION

OLD MUTUAL INVESTMENT GROUP The Fund invests in equities (that is, shares and other similar kinds of assets) of real estate investment trusts (REITs) and Real Estate Holding & Development companies which make up the Index. Real Estate Holding and Development companies are involved in real estate activities such as the ownership, trading and development of income-producing real estate.

NORTHERN TRUST The investment objective of the Strategy is to replicate the MSCI Emerging Markets ESG Leaders Index (the "Benchmark Index") and MSCI World ESG Leaders Index through the management of a diversified portfolio of equity securities with high Environmental, Social and Governance (ESG) performance relative to their sector peers in Developed and Emerging Markets Worldwide.

CUMULATIVE PERFORMANCE*

*Model portfolio performance was calculated using the index returns including reinvested income. All returns are calculated in USD net of underlying portfolio fees but gross of any discretionary fund management and investment vehicle administration fees. The above-mentioned returns have been simulated using the long-term strategic asset allocation of the model portfolio to create the return series. The table above includes simulated returns from September 2009 until inception of the model portfolio. We used the following market indices to determine the returns. Global Equity - MSCI World Equity ESG Index, emerging Markets - Emerging Markets Equity ESG Index, MSCI Emerging Markets Equity ESG Index and Global Bonds - Barclays Global Aggregate Bond Index.

FUND MANAGER INFORMATION

Kim Rassou has been in the investment management industry for 16 years and her experience includes both active and passive management. Prior to joining the team, Kim was a Portfolio Manager in the indexation team at Old Mutual Customised Solutions. In addition to her portfolio management responsibilities, she was responsible for the team's retail business development. Kim has completed an MBA at the University of Stellenbosch.

DIVERSIFICATION AND MANAGEMENT

Utilising index tracking capabilities to provide asset class exposure and where available we make use of indices that have a Environmental, Social and Governance screen. Asset allocation expertise of Old Mutual Multi-Managers are used to create multi-asset class portfolios consisting across a mix of asset classes such as Developed and Emerging Markets equities, Global Property and Global Bonds in order to target the relative US inflation objective.

The management of the Tailored Fund Portfolio USD range is performed in line with the requirements of the CAT 2 Discretionary Fund Manager licence held by OMLACSA. Active manager selection, Asset allocation and portfolio construction is based on the research process of Old Mutual Multi-Managers. The selection of passive investment vehicles is performed by the Tailored Fund Portfolio team. This range is managed and monitored on an ongoing basis by Tailored Fund Portfolios, in their capacity as a division within Old Mutual Wealth.

FUND COMMENTARY

When news broke of a substantial jump in infections outside China, including in the US, equity markets sold off faster than at any time since the Global Financial Crisis, posting double-digit losses in the final week of February. This pushed all major equity indices into the red year-to-date.

The US S&P500 lost 8.2% in February, and halved one-year returns to 8%. The Eurostoxx 600 similarly lost 8.3% in euros, cutting on-year returns to 4.4%. Emerging markets lost less than developed markets in February, but this is largely because China, the largest constituent of the MSCI Emerging Markets index, sold off in January already. Emerging markets lost 5% in February in dollars, and 1.5% over 12 months.

Our global equity benchmark, the MSCI All Countries World Index, lost 8% in February. Over 12 months its return has been reduced to 4.5% in dollars.

As equities sold off, investors sought the safety of bonds. The benchmark US 10-year bond yield fell to a record low of 1.12% by the end of the month. The Bloomberg Global Aggregate bond index, which covers the spectrum of fixed income from sovereign debt to corporate credit, returned 0.7% in February. Its 12-month performance of 7.9% is now ahead of equities.

Global listed property did not benefit from the decline in bond yields, but rather sold off with other risk assets. The FTSE EPRA/NAREIT Developed index lost 8% in dollars in the month, with the one-year return now only 3%.

Local equities did not escape the indiscriminate global selling, with double digit losses in February across the main JSE benchmarks, will all but eight shares posting declines. The FTSE/JSE All Share index lost 9% in February, dragging one-year returns into the red at -5.7%. The FTSE/JSE Capped Swix index lost 9.5% in the month and a similar amount over one year.

Listed property bore the brunt of the selling in February, with the FTSE/JSE All Property Index losing 15.7%. Over one year, the sector is down 18.5%.

Bonds rallied after the Budget Speech, but that only lasted a day before the spike in global risk aversion hit the local bond market. The All Bond index was flat in February, but is still ahead of cash over one year with a return of 8.9%.

The rand sold off in line with other emerging markets, losing 4.8% against the US dollar in February. The local currency is 12% weaker against the greenback year-to-date and a similar percentage over 12 months. This has cushioned the blow of declines in offshore asset declines from the perspective of local investors.

What are Discretionary Model Portfolios?

A Discretionary Model Portfolio is a combination of Old Mutual or other unit trust funds that are grouped together by TFP and made available by OMIS on its administrative platform.

Unit Trust Disclaimers

You should ideally see unit trusts as a medium to long term investment. The fluctuations of particular investment strategies affect how a fund performs. Your fund value may go up or down. Therefore, investment capital or return on your investment cannot be guaranteed. How a fund has performed in the past does not necessarily indicate how it will perform in the future. The fees and costs charged for managing your investment are accessible on the relevant fund's Minimum Disclosure Document (MDD) or table of fees and charges, both available on the manager's public website. Unit trusts are traded at ruling prices, may borrow to fund client disinvestments and may engage in script lending. The daily price is based on the current market value of the underlying fund's assets plus income minus expenses (NAV of the portfolio) divided by the number of units on issue. Should the underlying fund hold assets in foreign countries it may have risks regarding liquidity, the repatriation of funds, political and macro-economic situations, foreign exchange, tax, settlement, and the availability of information. Please contact us for risks specific to each country. A fund of fund is a portfolio that invests in other funds which levy their own charges, which could result in a higher fee structure for the fund of funds. The Net Asset Value to Net Asset Value figures are used for the performance calculations. The performance quoted is for a lump sum investment. The performance calculation includes income distributions prior to the deduction of taxes and distributions are reinvested on the ex-dividend date. Performances may differ as a result of actual initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Performance returns are the time-weighted return over the performance period measured. A manager has the right to close the portfolio to new investors in order to manage it more efficiently in accordance with its mandate.
